

Multilevel Diver

Knowledge Review

1. Describe how no decompression limits are determined.

2. Because people vary in their _____ and susceptibility to decompression sickness, no _____ or _____ can guarantee decompression sickness will never occur, even when diving within its limits.

3. Describe the recommended ascent procedure for any dive computer or table.

4. Explain why a dive requiring emergency decompression should be the last, and preferably only, dive of the day.

5. List eight rules that apply to diving with a computer.

6. List the three pieces of equipment you should have on any multilevel dive, beyond the regular equipment for the environment.

7. Identify the three potential hazards of multilevel diving.

8. Identify two common mistakes to avoid while multilevel diving with and without a computer.

9. List three considerations for planning a multilevel dive.

10. The eRDP/ML may be used to _____ the time a computer will allow on a first dive and repetitive dives.

11. Describe the proper action to take if a computer fails during a dive.

Student Statement: Any questions I answered incorrectly or incompletely I have had explained to me and I understand what I missed.
